

Advanced network optimization service delivers a comprehensive multi-point checklist that boosts network performance and minimizes exposure to emerging risks.

SmartOptimize

Boost performance and security with SmartOptimize

YOUR CHALLENGE

The only certainty in network security is change. Nothing is static; security threats—and your responses to them—change constantly. Over time, the constant changes required to maintain network security can negatively impact the performance of your network and increase potential exposure to security breaches.

OUR SOLUTION

We apply proven methodologies and robust analytic tools to detect security risks and inform how to repair and optimize, all in one easy-to-read report.

We analyze your Check Point security gateways and firewall management (SmartCenter or CMA) configuration and prepare a customized optimization report with recommendations based on proven network security performance enhancers including:

Rule Base and Security Policy Optimization

- Increase your capacity by merging and reducing rules
- Apply expert recommendations for immediate performance impact
- Quickly identify rules, objects and VPNs to clean-up
- Activate rule usage statistics for even deeper analysis

Risk Analysis

- Identify your risky rules and learn how to fix them
- Deep analysis of "Any" usage in rules

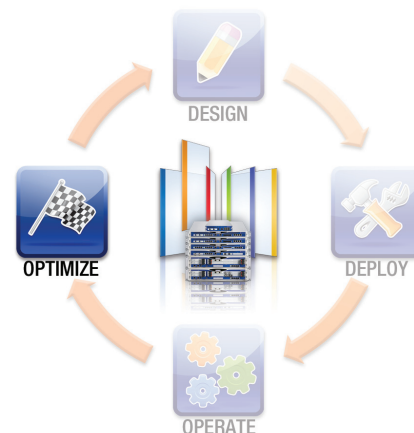

SERVICE FEATURES

- Firewall Management Analyzer
- Rule Base and Policy Optimizer
- Rule base risk analysis
- Log analysis

SERVICE BENEFITS

- Improved Check Point Security Gateway performance
- Faster policy installation time
- Better resource utilization
- More efficient capacity optimization
- Optional on-site optimization services

PROFESSIONAL SERVICES SOLUTIONS

Datasheet: SmartOptimize Service

Software Blade Analysis

- Quickly identify your latest security update
- Review your protections and their security confidence levels
- Identify protections that need to be activated
- Find protections that need to be switched from detect to prevent mode

Unified Reporting

- Analyze your disk usage, memory usage, user limit, anti-spoofing, stealth rules and more, all in one report
- Easy to read report summarizes the most critical security data in one place to reduce complexity and increase efficiency
- Graphical displays provide snapshot details of your most critical security details for quicker analysis

Unparalleled Security Knowledge and Experience

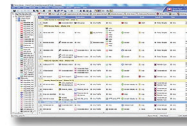

This powerful optimization tool and report is designed specifically to improve gateway security management performance, improve resource utilization and increase efficiency.

Our security consultants have extensive network security experience and unparalleled knowledge of Check Point security best practices.

How SmartOptimize Works

Customer provides

Configuration data from management server

Check Point security analysis

- Advanced tools
- Security experts

Check Point delivers

Detailed reports for actions for improving

- Security
- Performance
- Scalability

Sample Report

Your custom SmartOptimize Report will provide detailed recommendations that will help optimize your Check Point deployment. [Click here to see a sample Report.](#)
