

Check Point Security Administration NGX II Course Objectives

1. Use NGX tools to install VPN-1 NGX on Windows Server 2003 and SecurePlatform.
2. Use NGX tools to upgrade to VPN-1 NGX, from VPN-1/FireWall-1 NG or VPN-1 NG with Application Intelligence.
3. Distribute content security to Security Gateways, screen URLs and block suspicious Web data, and provide auditing capabilities and detailed reports.
4. Configure VPNs, using IKE encryption and Check Point's simplified VPN setup.
5. Use VPN-1 SecuRemote/SecureClient to configure remote access.
6. Configure VPN-1 NGX to allow VoIP traffic to pass through a corporate Security Gateway.
7. Given a variety of Check Point QoS configurations, determine how to allocate bandwidth.
8. Identify the features and limitations of Check Point High Availability solutions.
