

VPN-1 Power VSX NGX JumpStart

*Ensure successful implementation,
configuration of VPN-1 Power VSX*

YOUR CHALLENGE

Service providers and enterprises are under increasing pressure to reduce the cost of security in high-speed, mission-critical environments like data centers, points-of-presence, and large, segmented networks. Very often, VLAN technology is used to simplify these complex networks.

Securing such networks effectively entails implementing access control, secure connectivity, and attack protection. Common practice is to deploy a separate firewall, VPN, and attack protection devices in front of each network segment to achieve end-to-end security. However, implementing and maintaining large numbers of disparate solutions is expensive and time-consuming.

OUR SOLUTION

Check Point Professional Services offers a time-saving JumpStart program to help companies quickly implement complex configurations of VPN-1® Power VSX™ NGX. Also in a position to take advantage of this program are consulting organizations and system integrators interested in assisting their clients with VPN-1 Power VSX NGX installations.

This helpful service provides organizations with the skills and resources necessary to realize an almost immediate return on investment with the deployment of their Check Point VPN-1 Power VSX NGX solutions. Check Point Professional Services can provide you with configuration and implementation services along with complete documentation for the best possible implementation.

Management installation

VPN-1 Power VSX NGX requires either a Provider-1® Multi-Domain Server (MDS) or a SmartCenter™ server. Regardless of your choice, Professional Services will install and configure the software required to manage your new solutions. The configuration of the management platform chosen will be vital to its performance, and no one understands this better than Check Point Professional Services.

Operating system configuration

Provider-1 MDS or the SmartCenter server will be installed in an operating system environment by Check Point Professional Services. A test platform can often be turned into a production platform simply because it seems to be operating properly. However, test platforms usually do not undergo the same security scrutiny as production systems. From the very beginning, our service ensures that your production system meets its security and performance requirements.

SERVICE DESCRIPTION

The Check Point VPN-1® Power VSX™ NGX JumpStart program offers companies time-saving services to assist with the implementation and configuration of VPN-1 Power VSX NGX.

SERVICE FEATURES

- Management installation
- Operating system configuration
- Configuration consultation
- VPN-1 Power VSX NGX installation
- VLAN configuration
- VPN-1 Power VSX NGX advanced features configuration
- Log management consultation
- Detailed report

SERVICE BENEFITS

- Establish strong foundation for future VPN-1 Power VSX configuration
- Reduce implementation time for VPN-1 Power VSX NGX
- Rapidly implement management infrastructure
- Plan forward-looking path to fully implement all of VPN-1 Power VSX NGX
- Support staff is ready for future management

NGX™

*The NGX platform delivers a unified
security architecture for Check Point.*

Configuration consultation

Placing your VPN-1 Power VSX NGX solution into production prior to having a configuration plan can duplicate efforts and waste time. By developing the configuration beforehand, we are able to ensure that the configuration placed into production will perform as required.

VPN-1 Power VSX NGX installation

Like every solution from Check Point, VPN-1 Power VSX supports several platform options. Regardless of the options you choose, Professional Services will ensure a complete and secure installation. We will not need to perform multiple installations before arriving at the required performance. For Crossbeam platform installations there is a separate SKU that has also Professional Services days from Crossbeam.

VPN-1 Power VSX NGX advanced features configuration

VPN-1 Power VSX NGX introduces new, exciting features to enhance the operability and scalability of your system. Professional Services will assist in configuring and/or consulting on the various new features available in NGX—dynamic routing, virtual system load sharing, resource control, and more.

VLAN configuration

A powerful advantage of VPN-1 Power VSX NGX is its ability to integrate with your host environment's existing VLAN configuration. Check Point Professional Services will ensure proper integration with the VLANs—achieving optimum performance and scalability.

Log management consultation

As an added benefit, this service includes a basic overview of log management within a VPN-1/FireWall-1 SmartCenter server or Provider-1 NGX environment. Check Point Professional Services helps companies determine where to place log modules within the network and which rules to log as well as teaches general principles of log management.

Detail report

Check Point Software consultants also provide comprehensive documentation of the final configuration for the management platform and VPN-1 Power VSX NGX.

Note

Due to the complexity of individual environments, any quotes you may receive, whether verbal or otherwise, for the number of days required to perform a task are given as a guide for budgeting purposes only and are not meant to be a guarantee for the amount of time required to perform the project. Additional time, if necessary will be billed per day at the current Check Point On-site Daily Consulting Rate.

Recommendation

In order to ensure the most efficient use of time and complete wrapup and documentation, we recommend a half-day pre-engagement, off-site phone consultation and a half day of post-engagement off-site phone consulting.

Additional services

- Deploying a high availability VPN-1 Power VSX NGX solution
- Establishing high availability strategy for either Provider-1 NGX or VPN-1 SmartCenter server
- Applicable Check Point training course: VPN-1 Power VSX NGX
